Aris Antoniadis

aris.antoniadis@student.uva.nl arisaanto.github.io

I am a master's student in Cognitive Science at the University of Amsterdam. I study cognition where it takes form: in the tools we handle, the spaces we move through, and the relations in between. My current focus is physical space as a cognitive instrument, and the technologies that might inhabit it.

Education

University of Amsterdam **Research MSc, Brain and Cognitive Sciences** Expected June 2027
Selected coursework: Multimodal Interaction Design, Computational Cognitive Neuroscience, Advanced Neural and Cognitive Modeling, Philosophy of Cognition

Boston College **BS, Business Analytics** May 2025
Boston College **BA, Psychology** May 2025
Selected coursework: Do Robots Have Souls?, Applied Statistical Modeling, Machine Learning & Artificial Intelligence

Publications

[1] Kyle Fiore Law*, **Aris Antoniadis***, Liane Young, Daniela Goya-Tocchetto, Paige Amormino, and Stylianos Syropoulos. **Impartial Intergenerational Beneficence Predicts Interest in High-Impact, Long-Term Oriented Careers.** *Journal of Community & Applied Social Psychology*, 36(5):e70310, 2026.
10.1002/casp.70310 * Joint first authors

Research Experience

Cognitive Science Group, ETH Zurich **Visiting Researcher** Feb–Sep 2026
Principal Investigator: Christoph Hölscher Research Supervisor: Leonel Aguilar Melgar
Built a generative agent-based simulation to study how emergency department layouts shape staff movement and coordination, and how staff with different priorities might experience the same space.
Research report Code

Digital Interactions Lab, University of Amsterdam **Master's Research Project** Jan 2027 (planned)
Research Supervisor: Hamed Alavi Project: Building Equitable Accessibility Together (BEAT)
Studying where people who are blind or have low vision encounter navigation barriers in public spaces and what information would help them find their way.

Morality Lab, Boston College **Undergraduate Research Assistant** Sep 2023–May 2025
Principal Investigator: Liane Young
Coauthored research on how concern for future generations relates to career interests.

Independent Projects

Splatdex Project page 2026
A digital cabinet of curiosities for collecting, cataloging, and sharing Gaussian splats, where editable annotations and an AI assistant make each 3D object a starting point for learning.

Animate the Inanimate 2026 (in progress)
An experiment in making everyday objects feel like they're talking back by anchoring a character's voice to them through spatial audio.
